firing rate ( $\sigma_{inh}=4$ )/firing rate ( $\sigma_{inh}=10$ )

**SYNCHRONY  
REGULATES  
FLOW OF  
INFORMATION**

# EEG Source Mixing Problem

# Blind Source Separation

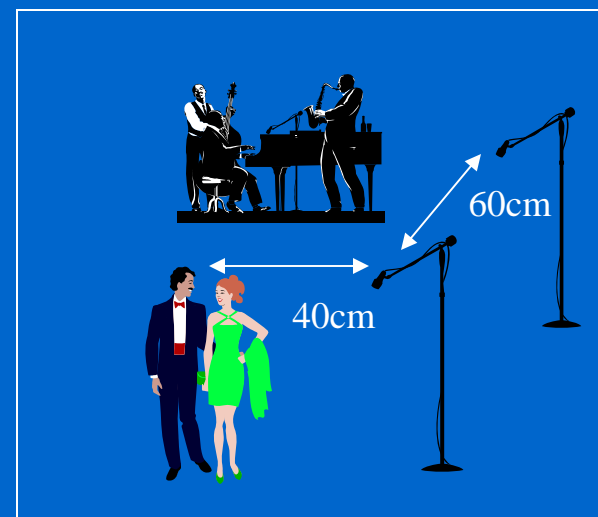

## Separation of Music & Speech

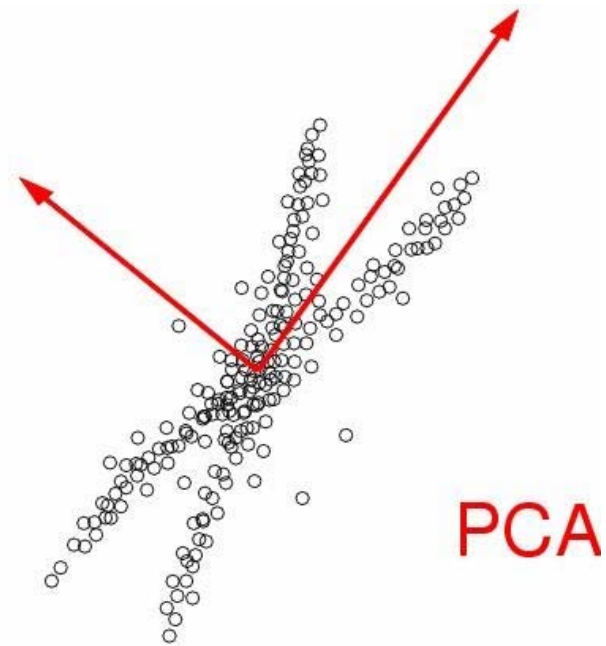

$\times 10^4$

### Experiment-Setup:

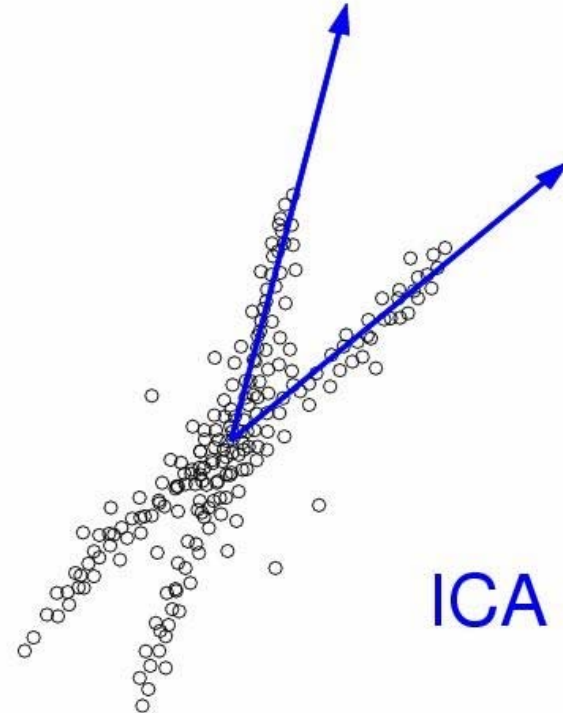

- office room (5m x 4m)
- two distant talking mics
- 16kHz sampling rate

**PCA** finds the directions of maximum variance

**ICA** finds the directions of maximum independence

# ICA Applied to EEG Data

# Time Course of ICA Components

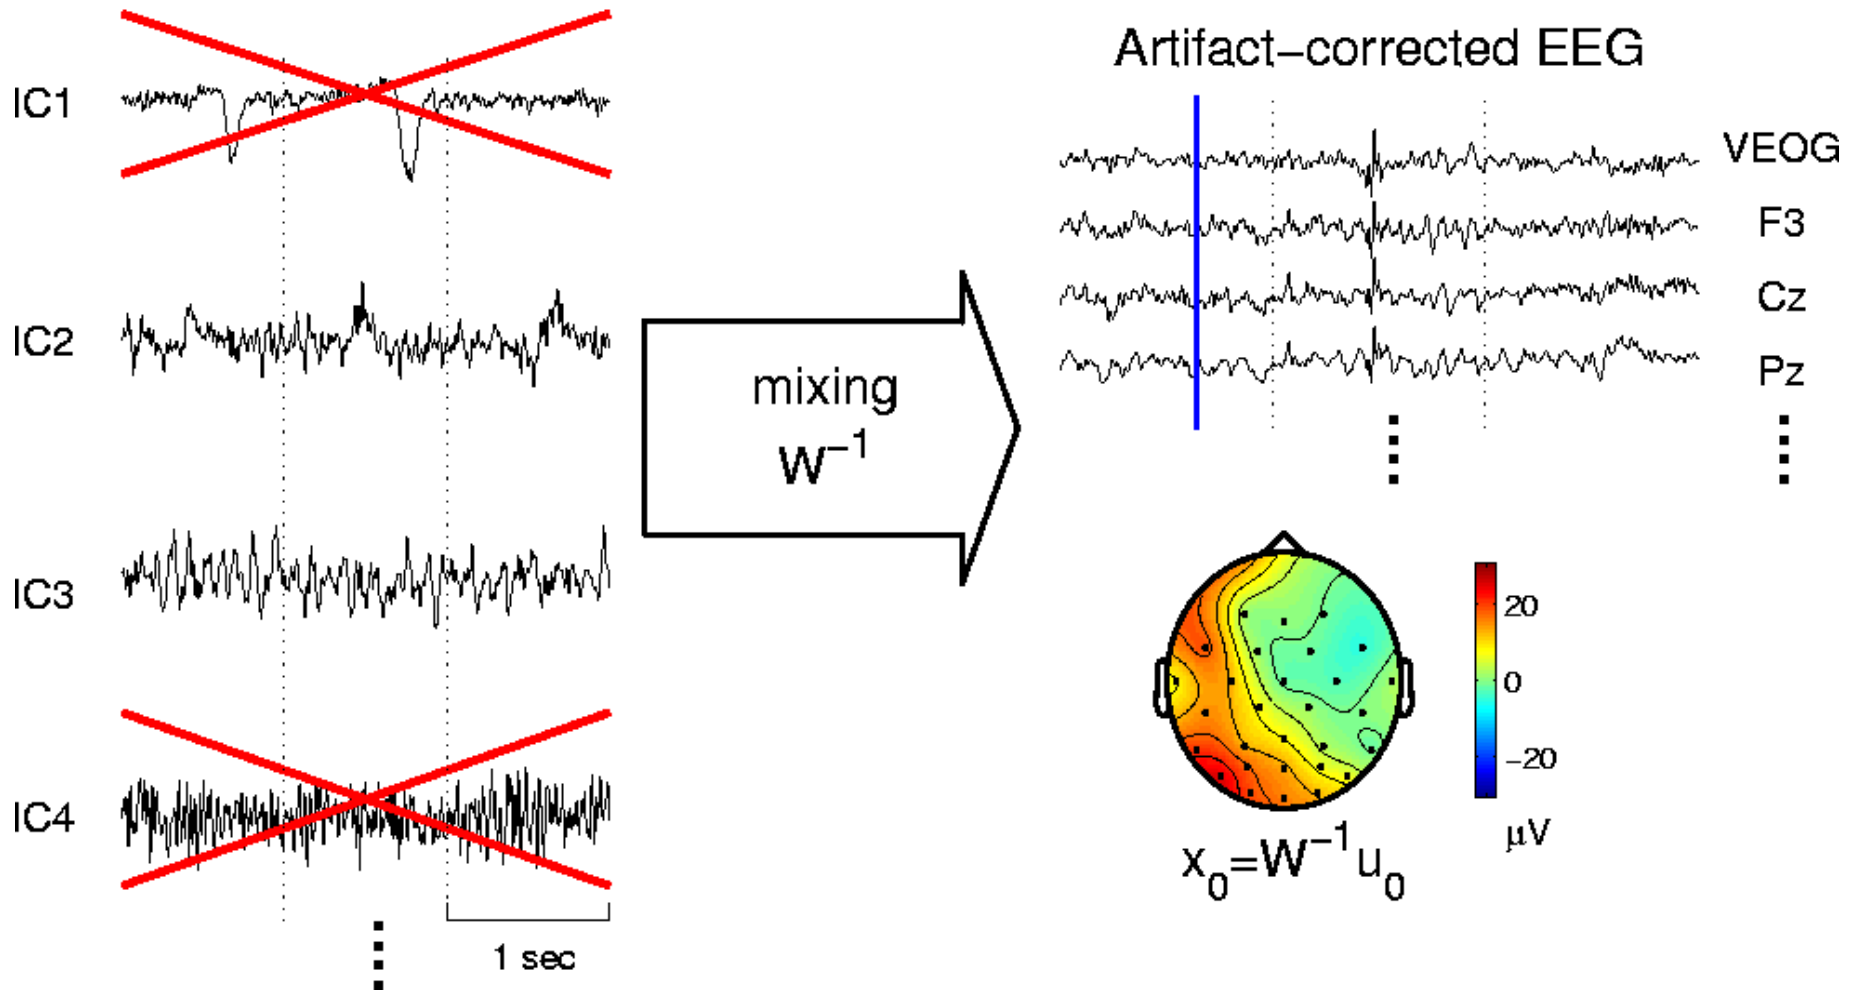

**Eye movement**

**Muscle activity**

# EEG Artifact Rejection

Original EEG

Corrected EEG

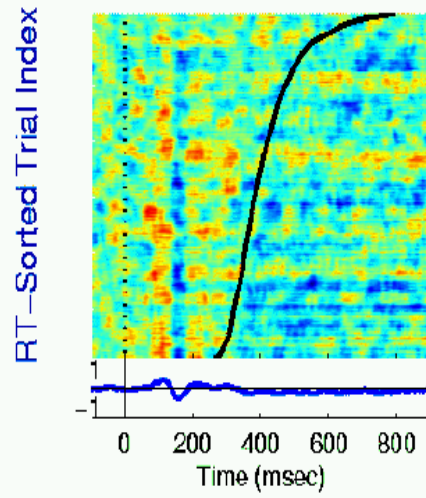

### Artifacts

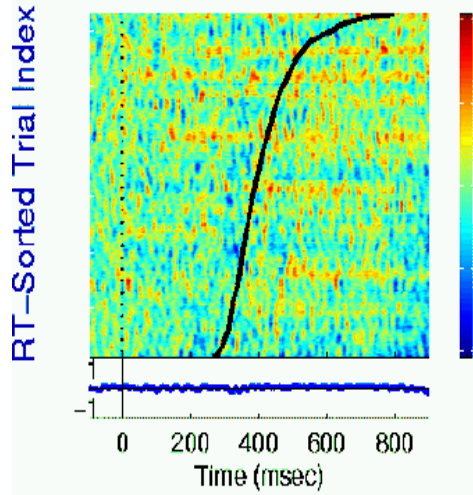

### Stimulus-locked

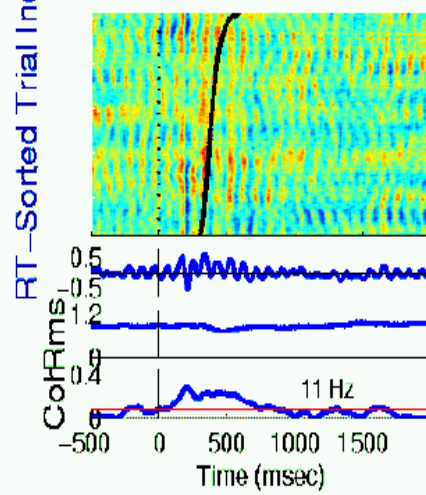

### Response-locked

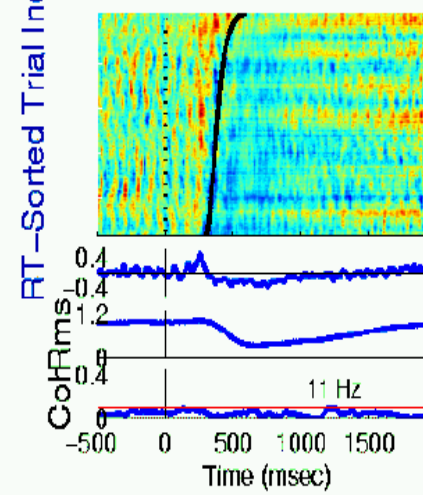

### Not phase-locked

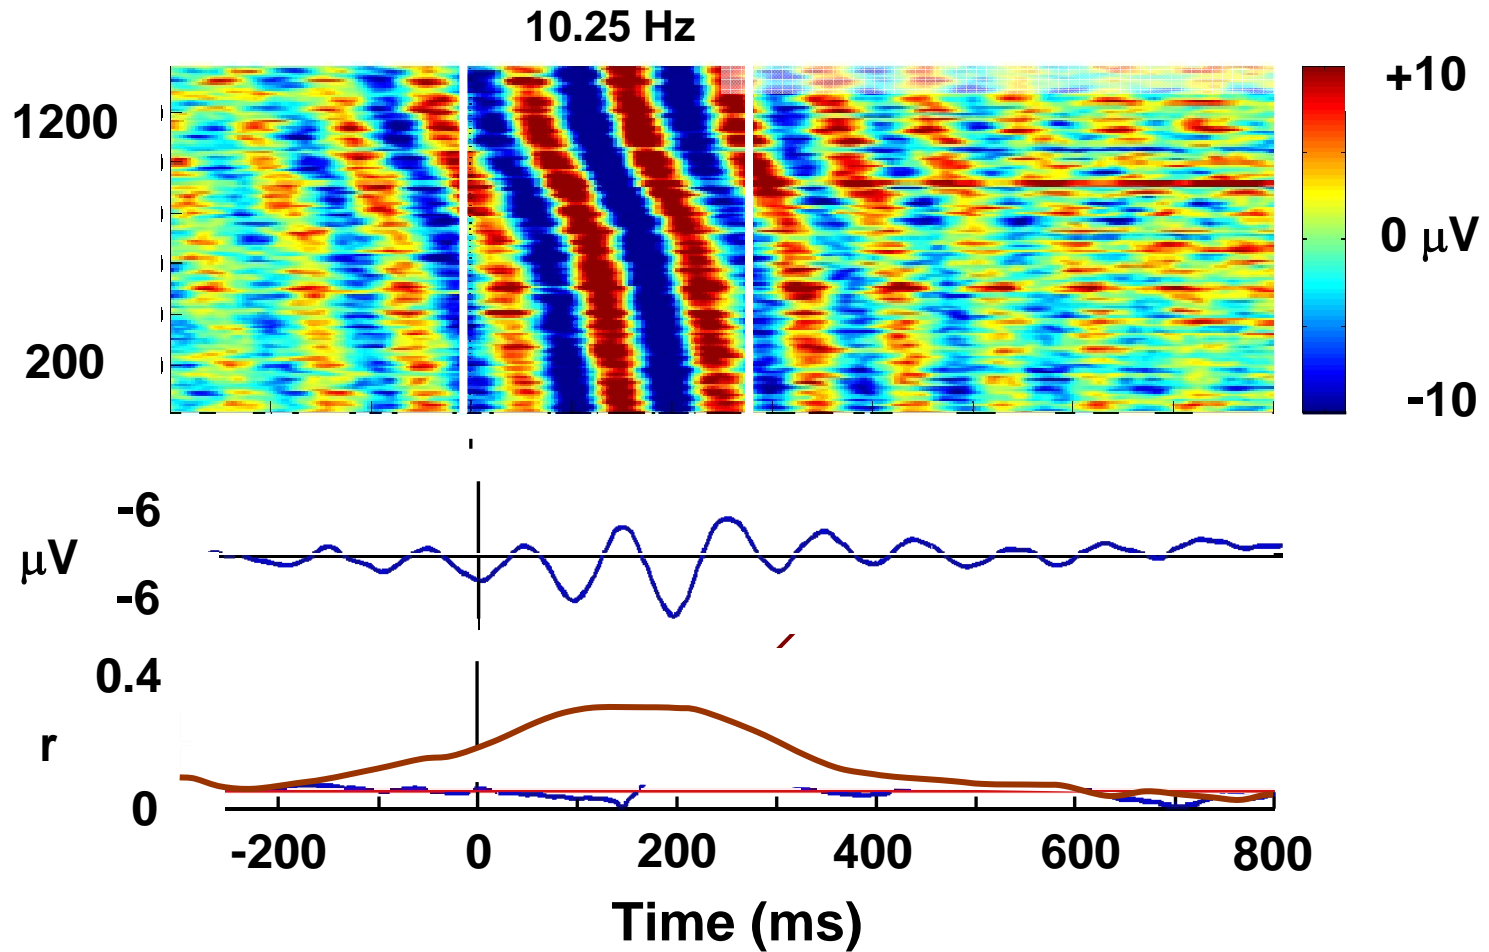

### Alpha Phase-resetting

### Mu Blocking

# Alpha Phase Resetting

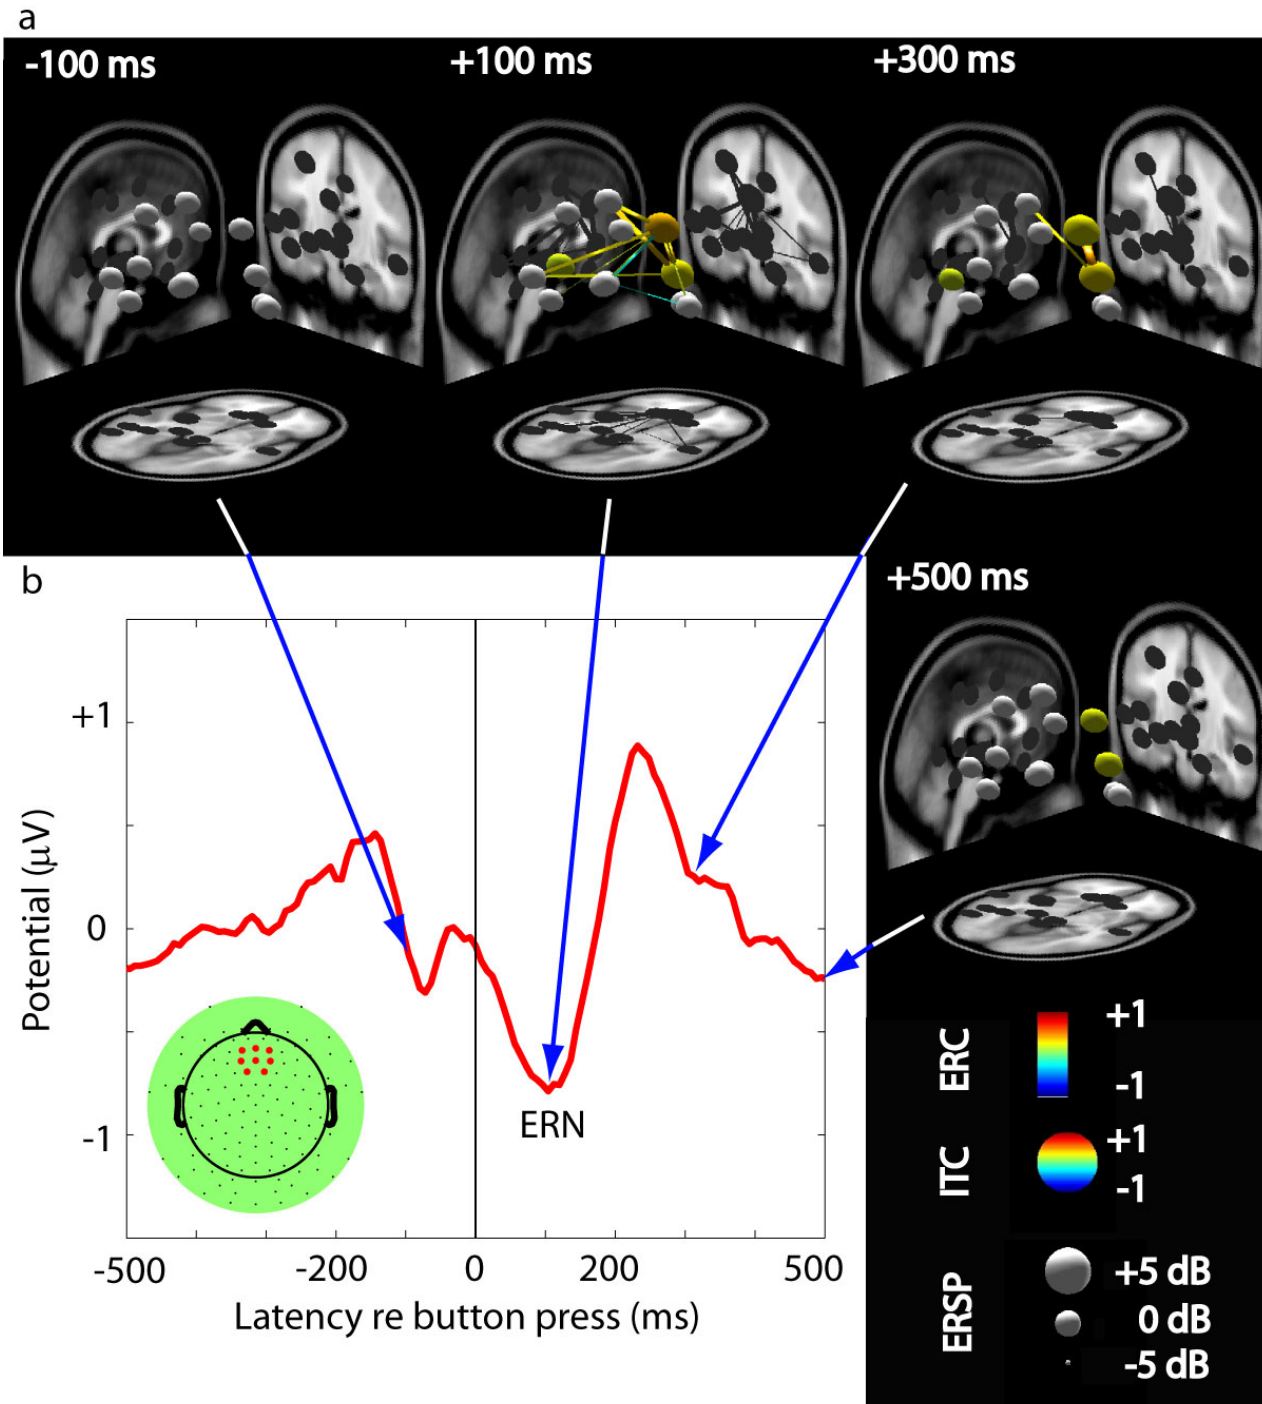

# Experiment

**Task:** Fixate **cross** while covertly attending to **green box**. Press button when **circle** is flashed in green box.

**Session:** 30 76-s task blocks, including 120 **targets** and 480 nontargets in each of the 5 locations.

**Subject:** 28 normal control, 14 autistic and 8 cerebellar lesion subjects.
