

# CS21 Decidability and Tractability

Lecture 19  
February 22, 2008

February 22, 2008

CS21 Lecture 19

1

## Outline

- NP-complete problems...
  - independent set
  - vertex cover
  - clique
  - Hamilton path/cycle
  - Traveling Salesperson Problem

February 22, 2008

CS21 Lecture 19

2

## The class NP

**Definition:**  $\text{NTIME}(t(n)) = \{L : \text{there exists a NTM } M \text{ that decides } L \text{ in time } O(t(n))\}$

$$\text{NP} = \bigcup_{k \geq 1} \text{NTIME}(n^k)$$

February 22, 2008

CS21 Lecture 19

3

## Poly-time verifiers

- $\text{NP} = \{L : L \text{ decidable by a TM with a "witness" or "certificate"}\}$
  - Very useful alternate definition of NP:  $\text{NP} = \{L : L \text{ is efficiently verifiable}\}$
- Theorem:** language L is in NP if and only if it is expressible as:
- $$L = \{x \mid \exists y, |y| \leq |x|^k, (x, y) \in R\}$$
- where R is a language in P.
- poly-time TM  $M_R$  deciding R is a "verifier"

4

## Search vs. Decision

- Definition: given a graph  $G = (V, E)$ , an independent set in G is a subset  $V' \subseteq V$  such that for all  $u, w \in V'$   $(u, w) \notin E$
- A problem: given G, find the largest independent set
- This is called a search problem
  - searching for *optimal* object of some type
  - comes up frequently

February 22, 2008

CS21 Lecture 19

5

## Search vs. Decision

- We want to talk about languages (or decision problems)
- Most search problems have a natural, related decision problem by adding a bound "k"; for example:
  - search problem: given G, find the largest independent set
  - decision problem: given (G, k), is there an independent set of size *at least* k

February 22, 2008

CS21 Lecture 19

6

## Ind. Set is NP-complete

**Theorem:** the following language is NP-complete:

$$IS = \{(G, k) : G \text{ has an IS of size } \geq k\}.$$

- Proof:
  - Part 1:  $IS \in NP$ . Proof?
  - Part 2: IS is NP-hard.
    - reduce from 3-SAT

February 22, 2008

CS21 Lecture 19

7

## Ind. Set is NP-complete

- We are reducing from the language:

$$3SAT = \{ \varphi : \varphi \text{ is a 3-CNF formula that has a satisfying assignment} \}$$

to the language:

$$IS = \{(G, k) : G \text{ has an IS of size } \geq k\}.$$

February 22, 2008

CS21 Lecture 19

8

## Ind. Set is NP-complete

The reduction  $f$ : given

$$\varphi = (x \vee y \vee \neg z) \wedge (\neg x \vee w \vee z) \wedge \dots \wedge (\dots)$$

we produce graph  $G_\varphi$ :

- one triangle for each of  $m$  clauses
- edge between every pair of contradictory literals
- set  $k = m$

February 22, 2008

CS21 Lecture 19

9

## Ind. Set is NP-complete

$$\varphi = (x \vee y \vee \neg z) \wedge (\neg x \vee w \vee z) \wedge \dots \wedge (\dots)$$

$$f(\varphi) = (G, \# \text{ clauses})$$

- Is  $f$  poly-time computable?
- YES maps to YES?
  - 1 true literal per clause in satisfying assign.  $A$
  - choose corresponding vertices (1 per triangle)
  - IS, since no contradictory literals in  $A$

February 22, 2008

CS21 Lecture 19

10

## Ind. Set is NP-complete

$$\varphi = (x \vee y \vee \neg z) \wedge (\neg x \vee w \vee z) \wedge \dots \wedge (\dots)$$

$$f(\varphi) = (G, \# \text{ clauses})$$

- NO maps to NO?
  - IS can have at most 1 vertex per triangle
  - IS of size  $\geq \#$  clauses must have exactly 1 per
  - since IS, no contradictory vertices
  - can produce satisfying assignment by setting these literals to true

February 22, 2008

CS21 Lecture 19

11

## Vertex cover

- Definition: given a graph  $G = (V, E)$ , a vertex cover in  $G$  is a subset  $V' \subseteq V$  such that for all  $(u, w) \in E$ ,  $u \in V'$  or  $w \in V'$

- A search problem:
  - given  $G$ , find the smallest vertex cover

- corresponding language (decision problem):
  - $VC = \{(G, k) : G \text{ has a VC of size } \leq k\}.$

February 22, 2008

CS21 Lecture 19

12

## Vertex Cover is NP-complete

**Theorem:** the following language is NP-complete:

$VC = \{(G, k) : G \text{ has a VC of size } \leq k\}$ .

- Proof:
  - Part 1:  $VC \in NP$ . Proof?
  - Part 2: VC is NP-hard.
    - reduce from?

February 22, 2008

CS21 Lecture 19

13

## Vertex Cover is NP-complete

- We are reducing from the language:

$IS = \{(G, k) : G \text{ has an IS of size } \geq k\}$

to the language:

$VC = \{(G, k) : G \text{ has a VC of size } \leq k\}$ .

February 22, 2008

CS21 Lecture 19

14

## Vertex Cover is NP-complete

- How are IS, VC related?
- Given a graph  $G = (V, E)$  with  $n$  nodes
  - if  $V' \subseteq V$  is an independent set of size  $k$
  - then  $V - V'$  is a vertex cover of size  $n - k$
- Proof:
  - suppose not. Then there is some edge with neither endpoint in  $V - V'$ . But then both endpoints are in  $V'$ . contradiction.

February 22, 2008

CS21 Lecture 19

15

## Vertex Cover is NP-complete

- How are IS, VC related?
- Given a graph  $G = (V, E)$  with  $n$  nodes
  - if  $V' \subseteq V$  is a vertex cover of size  $k$
  - then  $V - V'$  is an independent set of size  $n - k$
- Proof:
  - suppose not. Then there is some edge with both endpoints in  $V - V'$ . But then neither endpoint is in  $V'$ . contradiction.

February 22, 2008

CS21 Lecture 19

16

## Vertex Cover is NP-complete

The reduction:

- given an instance of IS:  $(G, k)$   $f$  produces the pair  $(G, n - k)$
- $f$  poly-time computable?
- YES maps to YES?
  - IS of size  $\geq k$  in  $G \Rightarrow$  VC of size  $\leq n - k$  in  $G$
- NO maps to NO?
  - VC of size  $\leq n - k$  in  $G \Rightarrow$  IS of size  $\geq k$  in  $G$

February 22, 2008

CS21 Lecture 19

17

## Clique

- Definition: given a graph  $G = (V, E)$ , a clique in  $G$  is a subset  $V' \subseteq V$  such that for all  $u, v \in V'$ ,  $(u, v) \in E$
- A search problem:
  - given  $G$ , find the largest clique
- corresponding language (decision problem):
  - $CLIQUE = \{(G, k) : G \text{ has a clique of size } \geq k\}$ .

February 22, 2008

CS21 Lecture 19

18

## Clique is NP-complete

**Theorem:** the following language is NP-complete:

$\text{CLIQUE} = \{(G, k) : G \text{ has a clique of size } \geq k\}$

- Proof:
  - Part 1:  $\text{CLIQUE} \in \text{NP}$ . Proof?
  - Part 2:  $\text{CLIQUE}$  is NP-hard.
    - reduce from?

February 22, 2008

CS21 Lecture 19

19

## Clique is NP-complete

- We are reducing from the language:

$\text{IS} = \{(G, k) : G \text{ has an IS of size } \geq k\}$

to the language:

$\text{CLIQUE} = \{(G, k) : G \text{ has a CLIQUE of size } \geq k\}$ .

February 22, 2008

CS21 Lecture 19

20

## Clique is NP-complete

- How are IS, CLIQUE related?
- Given a graph  $G = (V, E)$ , define its complement  $G' = (V, E' = \{(u,v) : (u,v) \notin E\})$ 
  - if  $V' \subseteq V$  is an independent set in  $G$  of size  $k$
  - then  $V'$  is a clique in  $G'$  of size  $k$
- Proof:
  - Every pair of vertices  $u,v \in V'$  has no edge between them in  $G$ . Therefore they have an edge between them in  $G'$ .

February 22, 2008

CS21 Lecture 19

21

## Clique is NP-complete

- How are IS, CLIQUE related?
- Given a graph  $G = (V, E)$ , define its complement  $G' = (V, E' = \{(u,v) : (u,v) \notin E\})$ 
  - if  $V' \subseteq V$  is a clique in  $G'$  of size  $k$
  - then  $V'$  is an independent set in  $G$  of size  $k$
- Proof:
  - Every pair of vertices  $u,v \in V'$  has an edge between them in  $G'$ . Therefore they have no edge between them in  $G$ .

February 22, 2008

CS21 Lecture 19

22

## Clique is NP-complete

The reduction:

- given an instance of IS:  $(G, k)$   $f$  produces the pair  $(G', k)$
- $f$  poly-time computable?
- YES maps to YES?
  - IS of size  $\geq k$  in  $G \Rightarrow \text{CLIQUE}$  of size  $\geq k$  in  $G'$
- NO maps to NO?
  - $\text{CLIQUE}$  of size  $\geq k$  in  $G' \Rightarrow \text{IS}$  of size  $\geq k$  in  $G$

February 22, 2008

CS21 Lecture 19

23

## Hamilton Path

- Definition: given a directed graph  $G = (V, E)$ , a Hamilton path in  $G$  is a directed path that touches every node exactly once.
- A language (decision problem):  
 $\text{HAMPATH} = \{(G, s, t) : G \text{ has a Hamilton path from } s \text{ to } t\}$

February 22, 2008

CS21 Lecture 19

24

## HAMPATH is NP-complete

**Theorem:** the following language is NP-complete:

HAMPATH =  $\{(G, s, t) : G \text{ has a Hamilton path from } s \text{ to } t\}$

- Proof:
  - Part 1: HAMPATH  $\in$  NP. Proof?
  - Part 2: HAMPATH is NP-hard.
    - reduce from?

February 22, 2008

CS21 Lecture 19

25

## HAMPATH is NP-complete

- We are reducing from the language:

3SAT =  $\{\varphi : \varphi \text{ is a 3-CNF formula that has a satisfying assignment}\}$

to the language:

HAMPATH =  $\{(G, s, t) : G \text{ has a Hamilton path from } s \text{ to } t\}$

February 22, 2008

CS21 Lecture 19

26

## HAMPATH is NP-complete

- We want to construct a graph from  $\varphi$  with the following properties:
  - a satisfying assignment to  $\varphi$  translates into a Hamilton Path from  $s$  to  $t$
  - a Hamilton Path from  $s$  to  $t$  can be translated into a satisfying assignment for  $\varphi$
- We will build the graph up from pieces called gadgets that “simulate” the clauses and variables of  $\varphi$ .

February 22, 2008

CS21 Lecture 19

27

## HAMPATH is NP-complete

- The variable gadget (one for each  $x_i$ ):

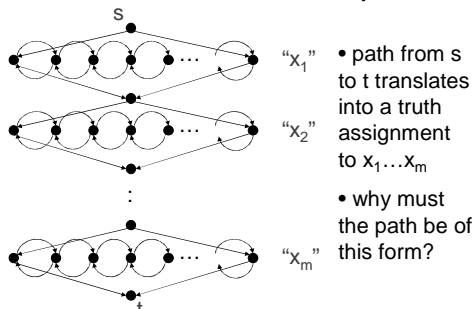

February 22, 2008

CS21 Lecture 19

28

## HAMPATH is NP-complete

February 22, 2008

CS21 Lecture 19

29

## HAMPATH is NP-complete

$\varphi = (x_1 \vee x_2 \vee \neg x_3) \wedge (\neg x_1 \vee x_4 \vee x_3) \wedge \dots \wedge (\dots)$

- How to ensure that all  $k$  clauses are satisfied?
- need to add nodes
  - can be visited in path if the clause is satisfied
  - if visited in path, implies clause is satisfied by the assignment given by path through variable gadgets
